

Nicaragua

Earthquake

12 July 2021

Final Event Briefing

22 July 2021

1 INTRODUCTION

A magnitude 5.2 earthquake occurred at 23:26:35 (UTC) on 12 July 2021, 15.5 km (9.7 mi) SSE of Pochomil, Nicaragua; 22.3 km (13.9 mi) S of San Rafael del Sur, Nicaragua and 32.6 km (20.2 mi) SW of Diriamba, Nicaragua. Estimates from the United States Geological Survey (USGS) located the epicentre of the event at 11.639°N, 86.449°W, and at a depth of 92.5 km (57.5 mi – Figure 1). Nicaragua was the only CCRIF member country where peak ground acceleration, computed with the CCRIF System for Probabilistic Hazard Evaluation and Risk Assessment (SPHERA) model, was greater than 0.01 g for this earthquake.

Final runs of CCRIF's loss model estimated no government losses for Nicaragua and therefore no payout is due.

2 CCRIF MODEL OUTPUTS

Under CCRIF's loss calculation protocol, a report using the CCRIF SPHERA model is produced for any earthquake with a magnitude greater than or equal to 5.0 that occurs within the region monitored by CCRIF and which generates a peak ground acceleration of at least 0.01 g in one or more grid cells of at least one CCRIF member country. Based on the SPHERA footprint for this earthquake, peak ground acceleration of up to 0.025 g was estimated in Nicaragua (Figure 2), but under SPHERA the earthquake generated a loss estimation of zero.

3 IMPACTS

Ten days after the earthquake's occurrence and according to Vice-President of Nicaragua, Rosario Murillo, and with information published in the local news^{2 3}, the earthquake was felt by the population in Carazo, Managua, Rivas, León and Chinandega but no injuries to persons or damage to infrastructure were reported.

According to the USGS “*Did You Feel It?*” online tool⁴, 13 persons in Nicaragua within a radius of 110 km (68.3 mi) from the epicentre reported the earthquake as being a “weak shake with no damage” to “moderate shake with very light damage” (Mercalli intensities: II - V).

4 TRIGGER POTENTIAL

Final runs of CCRIF's loss model generated no government losses for Nicaragua for this earthquake and therefore no payout is due under Nicaragua's CCRIF policy for earthquake.
